Ideation Phase
Define the Problem Statements

Date	4 October 2026
Team ID	----------
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Project Context:

Employees who need a rental car for business travel currently raise requests through e-mail, phone calls or spreadsheets. Dates, locations and car preferences are often incomplete, approvals get lost in inboxes, and nobody has a single place to see the status of a request. This project automates the whole process in ServiceNow using a Service Catalog item, Flow Designer workflows, approvals, business rules, client scripts and e-mail notifications.

Customer Problem Statement (filled for this project):

	Template field	Our answer
I am	Describe the customer and their attributes	An employee of the organization who travels for business and needs to book a rental car for a work assignment, client visit or site trip.
I'm trying to	List the thing they are trying to achieve	Raise a car rental request quickly with the right dates, pick-up/drop-off location and car type, get it approved, and have a car allocated without chasing anyone.
But	Describe the problems or barriers in the way	The request is handled over e-mail, calls or spreadsheets; forms are incomplete, approvals are delayed or missed, and I cannot see the status.
Because	Describe the reason the problem or barriers exist	There is no standard request form, no automated approval routing, no central tracking of fleet availability and no automatic notifications.
Which makes me feel	Describe the emotions that result	Frustrated, anxious about last-minute travel, uncertain whether the car will be ready, and reluctant to rely on the process.

Example Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee travelling for business	Request a rental car for specific dates and locations	I have to send e-mails or call and wait for a reply, and the request often lacks details	There is no standard catalog form with mandatory fields and no status tracking	Frustrated and uncertain
PS-2	A manager / approver	Review and approve car rental requests for my team	Requests arrive scattered across e-mail and I miss or delay them	There is no automated approval routing, reminders or a single approval queue	Overloaded and out of control
PS-3	A fleet / transport administrator	Allocate an available car to every approved request	I track availability and bookings manually in spreadsheets, causing clashes and errors	There is no central record linking requests, approvals, cars and notifications	Stressed and error-prone

How the Solution Addresses These Problems:

- **PS-1:** A Service Catalog item with mandatory fields, date validation (client script) and a request tracker (Request / RITM).
- **PS-2:** Flow Designer automatically creates an approval for the manager, with e-mail notification and reminders on pending approvals.
- **PS-3:** Approved requests generate a fulfillment task for the fleet team, with car allocation recorded and status updates sent to the requester.
