Ideation Phase
Empathize & Discover

Date	4 October 2026
Team ID	----------
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map: Car Rental Request Automation

User: Employee requesting a rental car for business travel (secondary users: approving manager and fleet administrator).

SAYS
- "I need a car from Monday to Thursday. Who do I ask?"
- "Has my request been approved yet?"
- "I sent the mail last week and nobody replied."
- "Can I simply fill a form and track it?"

THINKS
- "Will the car be ready when I land?"
- "My manager may be too busy to approve in time."
- "I don't know which details are mandatory."
- "There must be an easier way than e-mail chains."

EMPLOYEE REQUESTING A RENTAL CAR

Needs a fast, transparent, hassle-free way to get a car for work

DOES
- Sends e-mails or calls the admin desk to ask for a car
- Keeps re-entering dates, location and car preference
- Follows up repeatedly with the manager and fleet team
- Arranges a taxi or personal vehicle as a backup

FEELS
- Frustrated by delays and lack of visibility
- Anxious about last-minute travel
- Confused about the process and who owns it
- Relieved and confident when a request is confirmed

PAINS
- Incomplete or incorrect requests
- Approvals lost or delayed in inboxes
- No status tracking or notifications
- Double bookings and unavailable cars

GAINS
- One Service Catalog form with mandatory fields
- Automatic approval routing and reminders
- E-mail updates at every key stage

• Manual work for admins and managers	• Faster car allocation and fewer errors • Reports and a clear audit trail of all requests

Key Insights:

- Users want one simple place to request a car and see its status – the Service Catalog provides this.
- The biggest delay is waiting for approval, so approvals and reminders must be automated through Flow Designer.
- Proactive notifications at submission, approval, rejection and allocation remove the need for follow-up.
